Founding Product Engineer | Interfere

Cover letter

Hi Interfere team,

When I ran the NOC at Front Range Internet, we had plenty of monitoring. The harder part was figuring out which signal actually explained what a customer was seeing. I built diagnostics for the people taking escalations and tools for hosting customers to answer some of those questions themselves. What caught my eye about Interfere is that you're tackling that same gap from inside the product.

As a kid, getting a computer to do something I'd imagined felt like magic. These days I get the same feeling from making a difficult system understandable to someone else. That's why I built Kerf, a TypeScript framework that let me work on both the compiler and the interface developers use. And it's why I stayed close to support on NuPrice, a repricing product I built and ran for a client. An automated price change had to make sense to the person whose listings it affected.

During a live Quadrillion Art release, I wrote a PostgreSQL connector to keep purchase records tied to delivery and payouts. That was a different kind of pressure, but it made the same thing clear: fixing the underlying problem is only half the work. You also need a way to see what actually happened. I'd like to build that part of Interfere, from how the system collects evidence to what an engineer sees before deciding whether to ship a fix.

Thanks,
Chad Koslovsky
